Art Unit: 2111

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on *January 28, 2005* has been entered.

1. Claims 1-29 remain for examination.
2. The abstract of the disclosure is objected to because the current abstract does not reflect the inventive feature of the claimed invention to distinguish over the prior art. Correction is required. See MPEP § 608.01(b).
3. Claims 1-29 rejected under 35 U.S.C. 102(b) as being anticipated by Margolus et al, U.S. Patent No. 5,159,690, cited in the previous office action.

The rejection is respectfully maintained for the reason set forth in the previous office action incorporated herein by reference and for the reason that the reference teaches an update engine including a microprocessor execution unit capable of executing general purpose microprocessor instruction (col. 3, line 32; col. 13, line 30) and also teaches integrating more units on a single chip (col. 12, lines 65-68).

4. Applicant's arguments filed January 28, 2005 have been fully considered but they are not persuasive.

Applicant argued that the reference does not teach an update engine including a general purpose microprocessor instruction executing unit and integration on a single chip.

The reference, however, teaches those features as outlined above in paragraph

3.

Art Unit: 2111

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Drewry taught a method of using shift register for fetching rasterized cell data.

Hartmann taught a method of using a CPU running cellular automata rule.
